

Odoo Technical Training

Course Briefing

Welcome to Odoo's Technical Training. This training lays out the groundwork for Developing in Odoo and building trailed features to specific requirements.

Please review Training Agenda to see course details and subjects list

This course is for:

- ❑ Odoo partners
- ❑ Odoo developers
- ❑ Application Integrators
- ❑ Project managers implementing Odoo
- ❑ Customers who want to develop a tailored solution using Odoo
- ❑ Independent consultants who want to learn Odoo technologies

To get the most out of this course you must have:

- ❑ Practical Knowledge of Python, Javascript, HTML and Web Technologies
- ❑ Access to Odoo.sh or Subscription Code to create Odoo.sh
 - ❑ If you do not have a subscription code to create Odoo.sh then your account manager or customer success manager will be able to arrange that for you on-demand.
- ❑ Practical Git/Github Knowledge
- ❑ Web Browser Updated to latest released version (recommended: Firefox, Chrome)

At the end of this course you will be able to:

- ❑ Setup and Administer Odoo.sh
- ❑ Understand the Odoo Design concepts and Odoo Architecture
- ❑ Develop a new Odoo modules/application/features and Odoo Websites
- ❑ Write external integration with Odoo using Odoo Web Services
- ❑ Helps estimate development estimates
- ❑ Helps with project planning with developments

Training Logistics and Schedule:

This Training is designed to be a ten business day training course (monday to friday). Participants are expected to invest four hours every day to complete the training in a planned schedule.

The Training is divided into a day by day course. Each day, you will have roughly one hour of videos and two hours of exercises. This will be followed by a one hour collaborative group consulting session for scheduled training days.

The collaborative group consulting session will be led by a member(s) of the Technical Team at Odoo. The participants can ask questions related to the Training training course and material. It will be a group session and there will be like minded professionals in these trainings.

We recommend taking notes during the Videos and while doing the Exercises. Anything you are unsure of can be asked during the collaborative group consulting session.

Doing your homework and exercises is highly recommended, and we would expect that everyone has finished the days given training exercise before joining a collaborative group consulting session. Exercises are designed to give hands on experience of Odoo development

At the end of course you will have Odoo modules/applications that you developed and also practical experience of how to customize Odoo and the time required for the development of the given requirements.

Note that: *this Technical Training **does not cover** [Website Themes](#), [Odoo Widgets](#), or [Client Side Development](#) ([owl framework](#) / website javascript). However, after completing this training developing [Website Themes](#), [Odoo Widgets](#), or [Client Side Development](#) should be relatively easy to master.*

We hope this course will help you get started with developing in Odoo.
